# DESTINATION RESISTANCES

## A continuously changing range

Last season, the appearance of three new races of Bremia marked our sector. Again this year, downy mildew continues to progress and the IBEB-EU (International Bremia Evaluation Board for the EU) made official a new race, the BI:41EU. Its presence in certain basins raises new challenges in your choice of resistant varieties and we are here to face them.

As lettuce specialists, we constantly anticipate disease developments thanks to teams mobilized throughout the year to deliver, from the beginning of the campaign, varieties with the most complete resistance profiles.

Our Phytopathology and Breeding teams work hand in hand with our field teams to develop the varieties that will meet your needs.

Gautier Semences is also committed to organic farming producers by offering a wide and quality range, with 12 varieties available in organic.

This year again, secure your campaign with Gautier Semences, your resistance ally!
